

**IN THE CLAIMS**

1. (Currently Amended) A plasma etch process for selectively etching a layer of low-k dielectric material having a dielectric constant less than 4, comprising:

introducing into a plasma etch chamber, in which the layer of low-k dielectric material is situated, an etching gas mixture comprising a fluorine-rich fluorocarbon or hydrofluorocarbon gas, a nitrogen-containing gas, and a hydrogen-rich hydrofluorocarbon gas; and

maintaining a plasma of the etching gas mixture in the plasma etch chamber to etch the layer of low-k dielectric material, wherein the plasma of the etching gas mixture etches the low-k dielectric layer with an etch rate higher than about 4000 Å/min.

2. (Original) The process of claim 1 wherein the fluorine-rich fluorocarbon gas is CF<sub>4</sub>, the nitrogen-containing gas is N<sub>2</sub>, and the hydrogen-rich hydrofluorocarbon gas is selected from the group consisting of CH<sub>2</sub>F<sub>2</sub>, CH<sub>3</sub>F, and mixtures thereof.

3. (Cancelled)

4. (Original) The process of claim 1 wherein the fluorine-rich fluorocarbon or hydrofluorocarbon gas is selected from the group consisting of CF<sub>4</sub>, C<sub>2</sub>F<sub>8</sub>, CHF<sub>3</sub>, and mixtures thereof.

5. (Original) The process of claim 1 wherein the nitrogen-containing gas is selected from the group consisting of N<sub>2</sub>, NH<sub>3</sub>, NF<sub>3</sub>, and mixtures thereof.

6. (Original) The process of claim 1 wherein the hydrogen-rich hydrofluorocarbon gas is selected from the group consisting of CH<sub>2</sub>F<sub>2</sub>, CH<sub>3</sub>F, and mixtures thereof.

7. (Original) The process of claim 1 wherein the etching gas mixture is introduced into the plasma etch chamber by introducing the fluorine-rich fluorocarbon or hydrofluorocarbon gas at a first volumetric flow rate, the nitrogen-containing gas at a

second volumetric flow rate, and a hydrogen-rich hydrofluorocarbon gas at a third volumetric flow rate, and wherein the ratio of the second volumetric flow rate to the first volumetric flow rate is about 1:4 to 2:1.

8. (Original) The process of claim 1 wherein the etching gas mixture is introduced into the plasma etch chamber by introducing the fluorine-rich fluorocarbon or hydrofluorocarbon gas at a first volumetric flow rate, the nitrogen-containing gas at a second volumetric flow rate, and a hydrogen-rich hydrofluorocarbon gas at a third volumetric flow rate, and wherein the ratio of the third volumetric flow rate to the first volumetric flow rate is about 1:3 to 1:1.

9. (Original) The process of claim 1 wherein the layer of low-k dielectric material is over a substrate placed on a pedestal in the plasma etch chamber, and maintaining a plasma of the etching gas mixture comprises capacitively coupling RF power into the plasma etch chamber such that a substantial DC bias exists between the pedestal and the plasma.

10. (Previously Presented) The process of claim 1 wherein the layer of low-k dielectric material is over a substrate placed on a pedestal in the plasma etch chamber, and maintaining a plasma of the etching gas mixture comprises:

applying a bias power to the pedestal; and

applying a source power to a top electrode facing the pedestal, wherein the source power has a frequency higher than a frequency of the bias power.

11. (Original) The process of claim 1 wherein maintaining a plasma of the etching gas mixture further comprises applying a slowly rotating magnetic field in the chamber.

12. (Original) The process of claim 1 wherein the etching gas mixture further comprises an inert gas selected from the group consisting of argon, helium, neon, xenon, and krypton.

13. (Original) The process of claim 12 wherein the etching gas mixture is introduced into the plasma etch chamber by introducing the fluorine-rich fluorocarbon or hydrofluorocarbon gas at a first volumetric flow rate, and the inert gas at a second volumetric flow rate, and wherein the ratio of the second volumetric flow rate to the first volumetric flow rate is about 20:1 to 50:1.

14-20. (Cancelled)

21. (New) A plasma etch process for selectively etching a layer of low-k dielectric material having a dielectric constant less than 4, comprising:

introducing into a plasma etch chamber, in which the layer of low-k dielectric material is situated, an etching gas mixture comprising a fluorine-rich fluorocarbon or hydrofluorocarbon gas, a nitrogen-containing gas, and a hydrogen-rich hydrofluorocarbon gas; and

maintaining a plasma of the etching gas mixture in the plasma etch chamber to etch the layer of low-k dielectric material, wherein the etching gas mixture is introduced into the plasma etch chamber by introducing the fluorine-rich fluorocarbon or hydrofluorocarbon gas at a first volumetric flow rate, the nitrogen-containing gas at a second volumetric flow rate, and a hydrogen-rich hydrofluorocarbon gas at a third volumetric flow rate, and wherein the ratio of the second volumetric flow rate to the first volumetric flow rate is about 1:4 to 2:1.

22. (New) The process of claim 21 wherein the fluorine-rich fluorocarbon or hydrofluorocarbon gas is selected from the group consisting of  $\text{CF}_4$ ,  $\text{C}_2\text{F}_8$ ,  $\text{CHF}_3$ , and mixtures thereof.

23. (New) The process of claim 21 wherein the hydrogen-rich hydrofluorocarbon gas is selected from the group consisting of  $\text{CH}_2\text{F}_2$ ,  $\text{CH}_3\text{F}$ , and mixtures thereof.

24. (New) A plasma etch process for selectively etching a layer of low-k dielectric material having a dielectric constant less than 4, comprising:

introducing into a plasma etch chamber, in which the layer of low-k dielectric material is situated, an etching gas mixture comprising a fluorine-rich fluorocarbon or hydrofluorocarbon gas, a nitrogen-containing gas, and a hydrogen-rich hydrofluorocarbon gas; and

maintaining a plasma of the etching gas mixture in the plasma etch chamber to etch the layer of low-k dielectric material, wherein the etching gas mixture is introduced into the plasma etch chamber by introducing the fluorine-rich fluorocarbon or hydrofluorocarbon gas at a first volumetric flow rate, the nitrogen-containing gas at a second volumetric flow rate, and a hydrogen-rich hydrofluorocarbon gas at a third volumetric flow rate, and wherein the ratio of the third volumetric flow rate to the first volumetric flow rate is about 1:3 to 1:1.

25. (New) The process of claim 24 wherein the fluorine-rich fluorocarbon or hydrofluorocarbon gas is selected from the group consisting of  $\text{CF}_4$ ,  $\text{C}_2\text{F}_8$ ,  $\text{CHF}_3$ , and mixtures thereof.

26. (New) The process of claim 24 wherein the hydrogen-rich hydrofluorocarbon gas is selected from the group consisting of  $\text{CH}_2\text{F}_2$ ,  $\text{CH}_3\text{F}$ , and mixtures thereof.
